Applicant's amendment dated August 27, 2010, has been fully considered.

Page 2

Applicant amended the independent claims to include a new limitation "condensing...injecting at least a portion of the condensed working fluid into the roots blower during the expansion of further working fluid. A new ground of rejection has been made based on a newly discovered reference from further searches.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 21, 24-27, 35-36, 38-39, 41-43, are rejected under 35 U.S.C. § 103(a) as being unpatentable over US 2003/0172654 (Lawheed) in view of US 4429661 (McClure) and US 5027602 (Glen et al). Lawheed discloses an engine 42 with rotors 100 forming a roots blower with double lobes in figure 6, an evaporator 26, and a condenser 46. Lawheed does not disclose a triple lobes rotor, and a portion of the condensed working fluid is supplied into the roots blower. McClure discloses it's well known to use triple-blades roots blower 60, 140, in a heat power plant with an evaporator 120. Glen et al discloses a thermodynamic cycle comprising a boiler 10, a two-phase expander 12, a condenser 16, a pump 18 with liquid spray nozzle 20 for spraying a portion of condensed fluid into the intake of said expander 12. It would have been obvious at the time the invention was made to a person having ordinary skill in the

Art Unit: 3748

art to use triple blade roots blower in the system of Lawheed as taught by McClure for the purpose of improving the flow rates by the triple blades rotor, and to provide a bypass including a pump, a liquid nozzle in Lawheed as taught by Glen et al for the purpose of producing appropriate amount of power based on the characteristics of said two-phase fluid.

Claims 28-34 are rejected under 35 U.S.C. § 103(a) as being unpatentable over US 2003/0172654 (Lawheed) in view of McClure, Glen et al, and WO 85/02881 (Lipovetz et al). Lawheed as modified by McClure and Glen et al discloses all the claimed subject matter as set forth above in the rejection of claim 21, but does not disclose absorbent step. Lipovetz et al is relied upon to disclose it's well known in a closed cycle system to have an engine 3 with expansion step, then after expansion, a component of the working substance is absorbed using an absorption agent (note page 7, lines 20-30). It would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide an absorption agent in the system of Lawheed as taught by Lipovetz et al for the purpose of achieving appropriate temperature as claimed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hays et al discloses a two-phase turbine.

Application/Control Number: 10/583,925

Art Unit: 3748

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Examiner Nguyen whose telephone number is (571) 272-4861. The examiner can normally be reached on Tuesday--Friday from 12:30 AM to 10:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas E. Denion can be reached on 571-272-4859. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
